HOW TO FIND H-INDEX IN GOOGLE SCHOLAR?

1. Search by the author name in Google Scholar [www.scholar.google.com](http://www.scholar.google.com). If the author have a public profile in Google Scholar, you can see the h-index and other information by clicking the author name.

2. H-index is calculated by using the Google Scholar data that is included in researcher's profile. On a flip side, Google's automatic indexing results in non-scientific publications and their citations getting included in Google Scholar.
